The shortest path from the origin to the destination is  $O \rightarrow A \rightarrow B \rightarrow E \rightarrow D \rightarrow T$ , with a total distance of 160 miles.

題號 9.3-6 (b)

10.3-6.

(a) The flying times play the role of "distances."

(b) Shortest path:  $SE \rightarrow C \rightarrow E \rightarrow LN$ , with total flight time 11.3

| $n$ | Solved Nodes<br>Directly Connected<br>to Unsolved Nodes | Closest<br>Connected<br>Unsolved Node | Total Distance<br>Involved                                                 | $n$ th<br>Nearest<br>Node | Minimum<br>Distance | Last<br>Connection |

**7. 找出圖 8.22 之網路的最小擴充樹。**

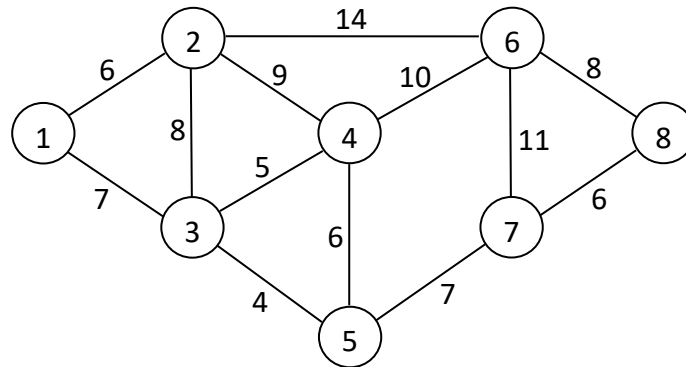

圖 8.22

**Sol.** 應用最小擴充樹的演算法，可得以下的求解程序（參見圖 f）：

1. 選擇長度最短的弧 (3,5)。
2. 因節點 4 與目前的連接圖最近，所以加入弧 (3,4)。
3. 繼續求解程序，會依序加入 (1,3)、(1,2)、(5,7)、(7,8)、(6,8)。

所得到最小擴充樹的總長度為 43。

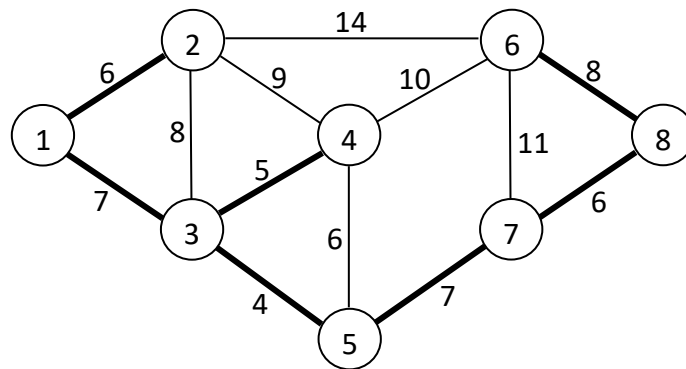

圖 f

**14. 考慮圖 8.26 的網路。決定由節點 1 至節點 9 的最大流量以及各弧的最佳流量。**

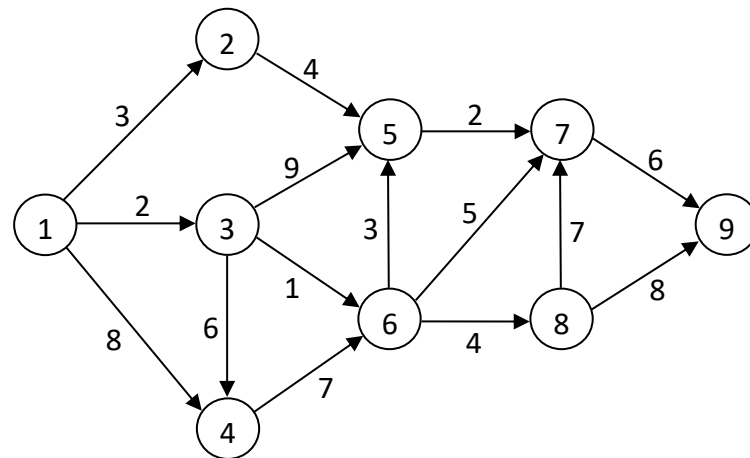

圖 8.26

**Sol.** 應用最大流量問題演算法可得圖 n 的求解過程。表 G 列出以上所找出的所有路徑。欲決定各弧的最佳流量，我們可比較圖 n 與圖 8.26，兩圖之各弧的流量差異即為各弧的最佳流量，結果如圖 o 所示。

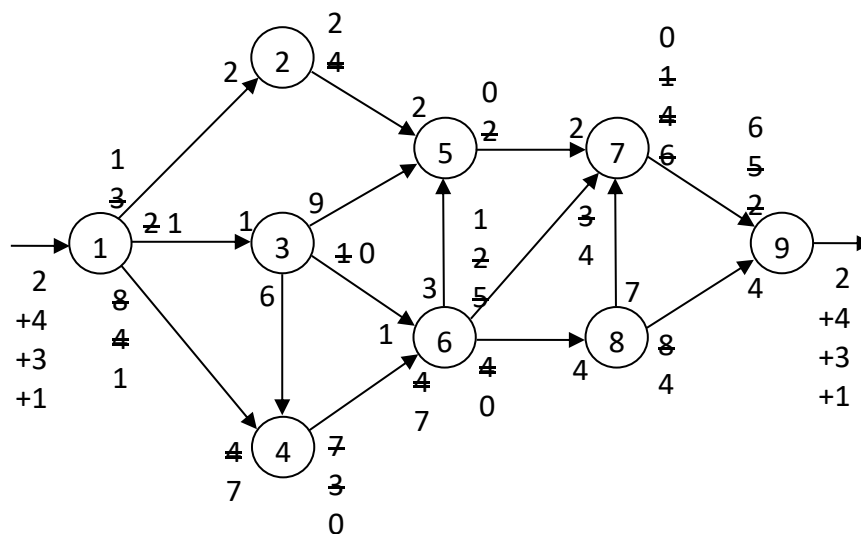

圖 n

表 G

| 路徑                | 流量 |
|-------------------|----|
| 1 → 2 → 5 → 7 → 9 | 2  |
| 1 → 4 → 6 → 8 → 9 | 4  |
| 1 → 4 → 6 → 7 → 9 | 3  |
| 1 → 3 → 6 → 7 → 9 | 1  |
| 合計                | 10 |

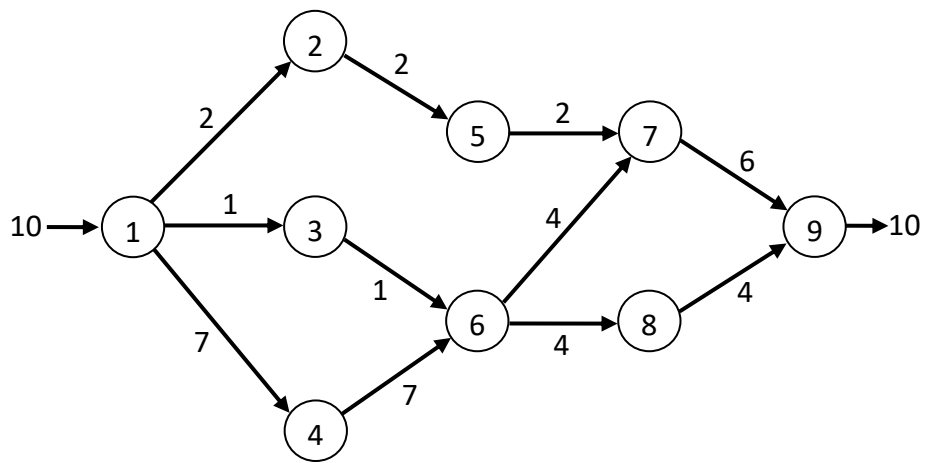

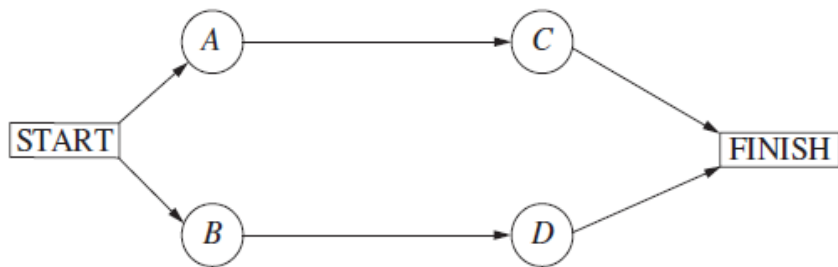

圖 o

題號 9.8-1

注意：課本圖有錯，正確如下：

10.8-1.

| Activity to Crash | Crash Cost | Length of Path |         |
|-------------------|------------|----------------|---------|
|                   |            | $A - C$        | $B - D$ |
|                   |            | 14             | 16      |
| $B$               | \$5,000    | 14             | 15      |
| $B$               | \$5,000    | 14             | 15      |
| $D$               | \$6,000    | 14             | 14      |
| $C$               | \$4,000    | 13             | 14      |
| $D$               | \$6,000    | 13             | 13      |
| $C$               | \$4,000    | 12             | 13      |
| $D$               | \$6,000    | 12             | 12      |

題號 9.8-2 (d)

(d) Let  $x_j$  be the reduction in the duration of activity  $j$  due to crashing for  $j = A, B, C, D$ . Also let  $y_j$  denote the start time of activity  $j$  for  $j = C, D$  and  $y_{\text{FINISH}}$  the project duration.

$$\text{minimize} \quad C = 5000x_A + 5000x_B + 4000x_C + 6000x_D$$

$$\text{subject to} \quad x_A \leq 3, x_B \leq 2, x_C \leq 2, x_D \leq 3$$

$$y_C \geq 0 + 8 - x_A$$

$$y_D \geq 0 + 9 - x_B$$

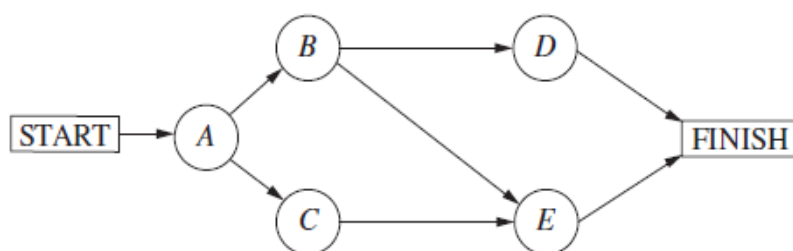

$$y_{\text{FINISH}} \geq y_C + 6 - x_C$$

$$y_{\text{FINISH}} \geq y_D + 7 - x_D$$

$$y_{\text{FINISH}} \leq 12$$

$$\text{and} \quad x_A, x_B, x_C, x_D, y_C, y_D, y_{\text{FINISH}} \geq 0$$

題號 9.8-3 (a) 注意：課本圖有錯，正確如下：

10.8-3.

(a) \$7,834 is saved by the new plan given below.

| Activity to Crash | Crash Cost | Length of Path |           |           |
|-------------------|------------|----------------|-----------|-----------|
|                   |            | A - B - D      | A - B - E | A - C - E |
|                   |            | 10             | 11        | 12        |
| C                 | \$1,333    | 10             | 11        | 11        |
| E                 | \$2,500    | 10             | 10        | 10        |
| D & E             | \$4,000    | 9              | 9         | 9         |
| B & C             | \$4,333    | 8              | 8         | 8         |

| Activity | Duration | Cost                |
|----------|----------|---------------------|
| A        | 3 weeks  | \$54,000            |
| B        | 3 weeks  | \$65,000            |
| C        | 3 weeks  | <del>\$58,666</del> |
| D        | 2 weeks  | \$41,500            |
| E        | 2 weeks  | \$80,000            |

→ 68666

(1) 原本成本:  $54000 + 62000 + 66000 + 40000 + 75000 = 297000$

間接成本:  $5000 * 12 = 60000$

原本總成本 =>  $297000 + 60000 = 357000$

(2) 現在趕工成本:  $54000 + 65000 + 68666 + 41500 + 80000 = 309166$

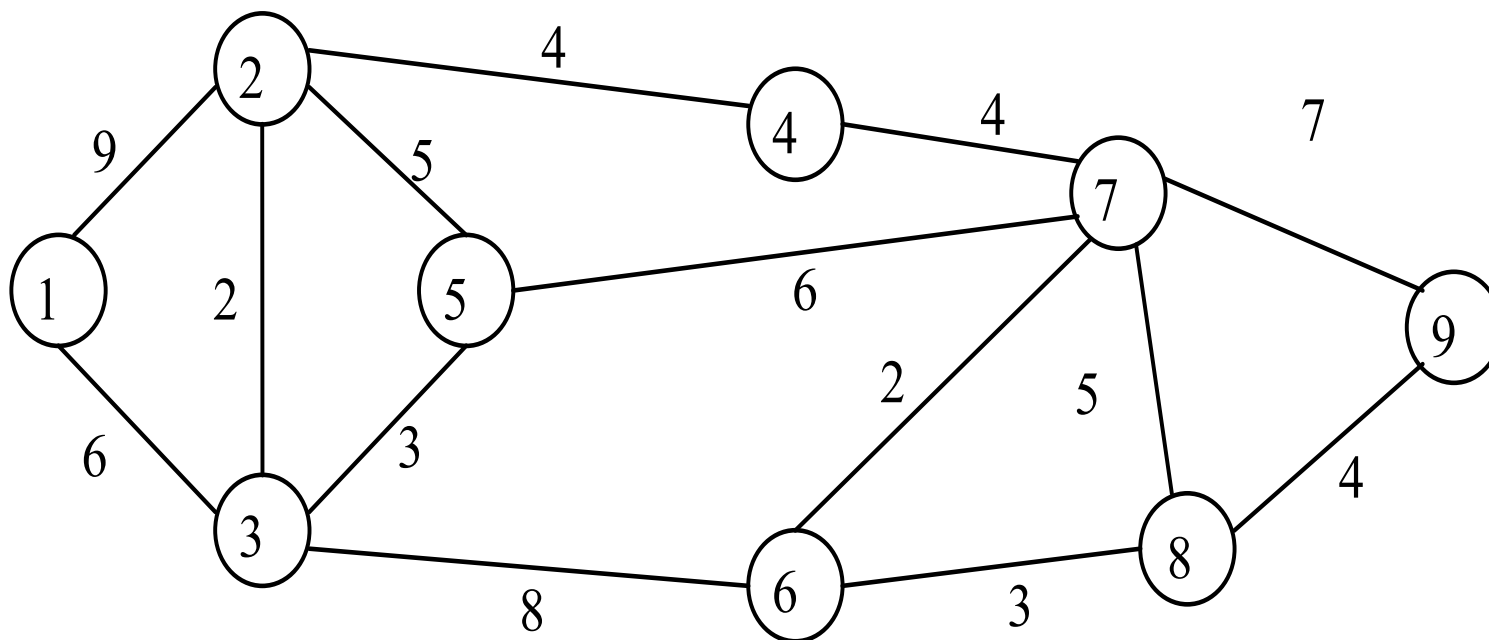

間接成本:  $5000 * 8 = 40000$

趕工的總成本 =>  $309166 + 40000 = 349166$

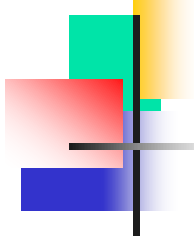

因此 => 原本總成本 - 趕工的總成本 =  $357000 - 349166 = 7834$

## 例題8-1

設有網路圖如下，代表各城市間的距離，為架設電腦網路，請求出最短伸展樹

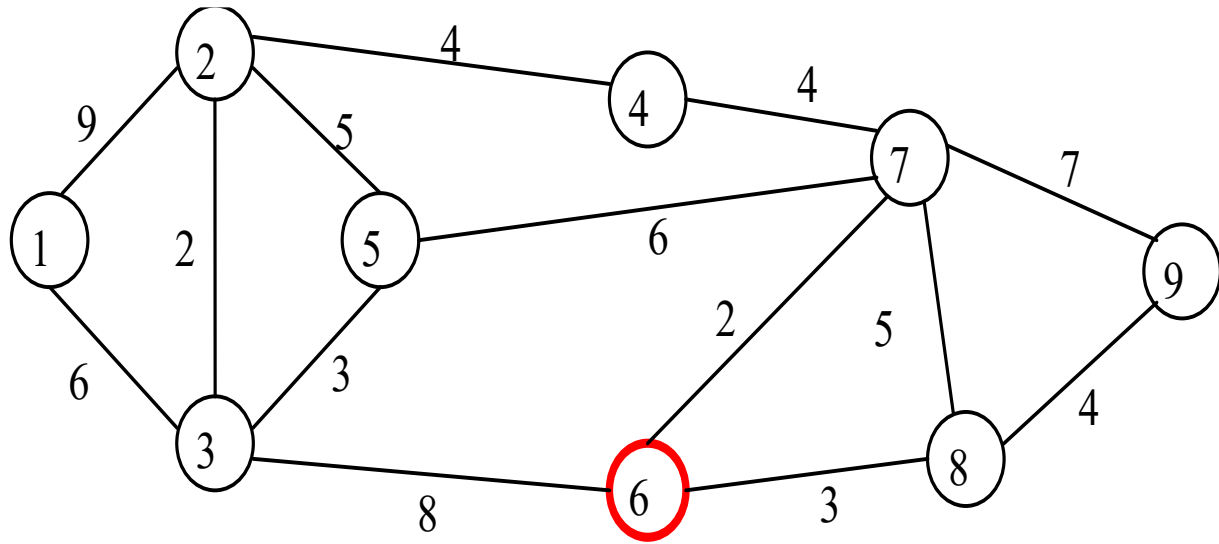

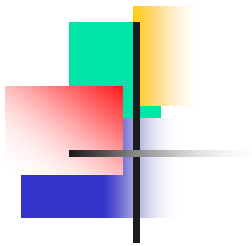

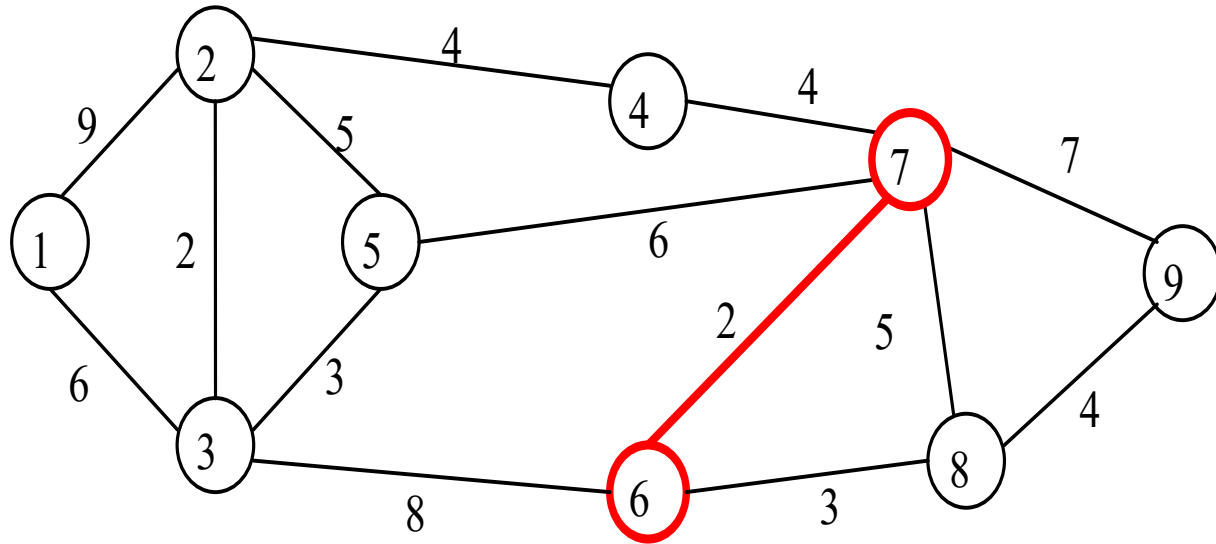

## 解：

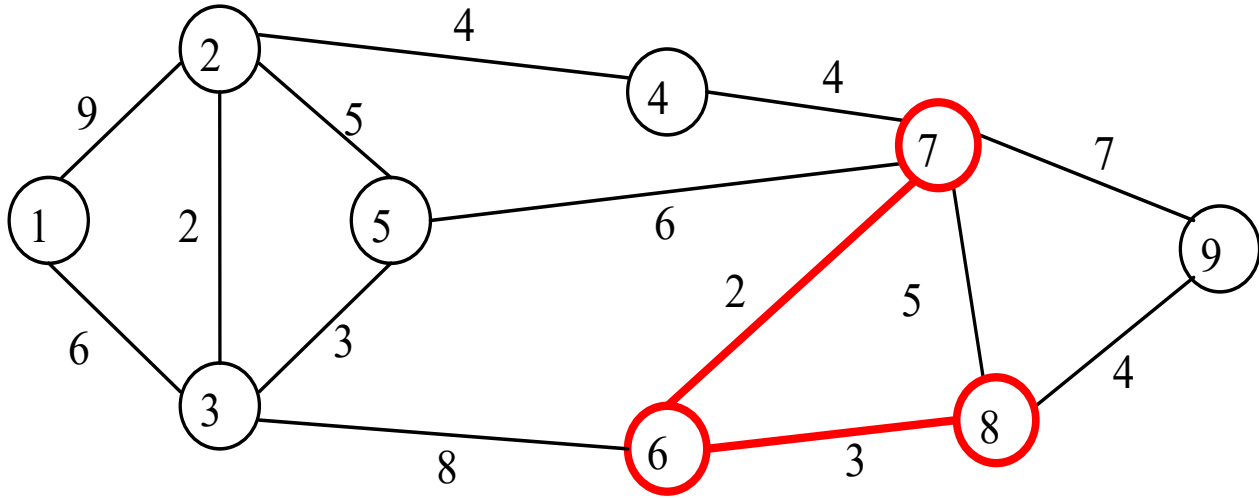

先隨機圈選節點 ⑥。與節點 ⑥ 相連的有節點 ③ ⑦ ⑧，其間弧線以節點 ⑥ ⑦ 間的最短，故再圈選 ⑥ ⑦ 間之弧線與節點 ⑦。再檢視與節點 ⑥ ⑦ 相連的有節點 ③ ④ ⑤ ⑧ ⑨，其間弧線以節點 ⑥ ⑧ 間弧線最短，因而圈選 ⑥ ⑧ 間弧線與節點 ⑧，如此反覆，即可得最佳解，請參見圖 8-4 (a) ~ (I)。

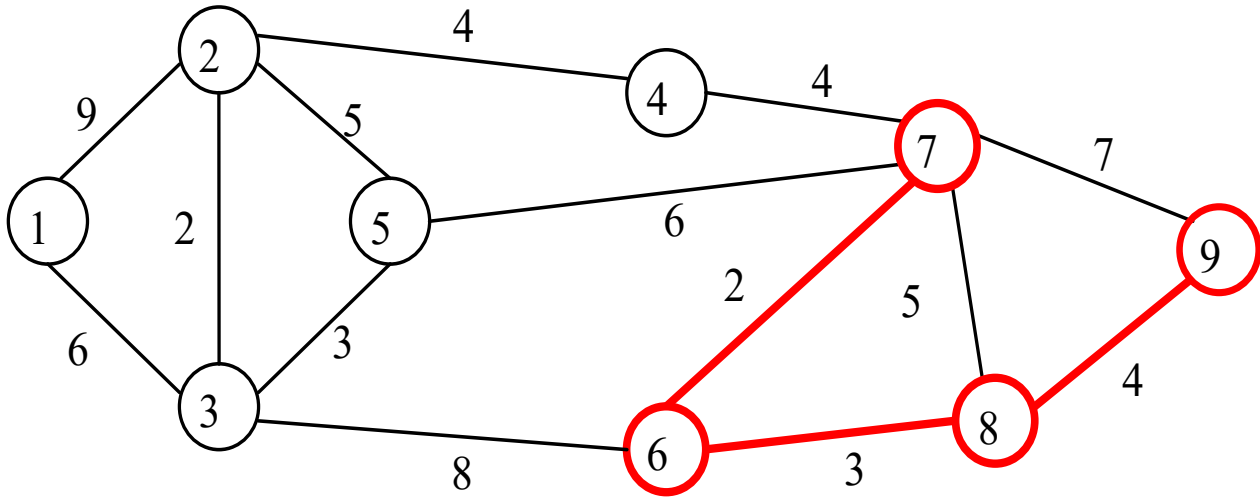

(a)

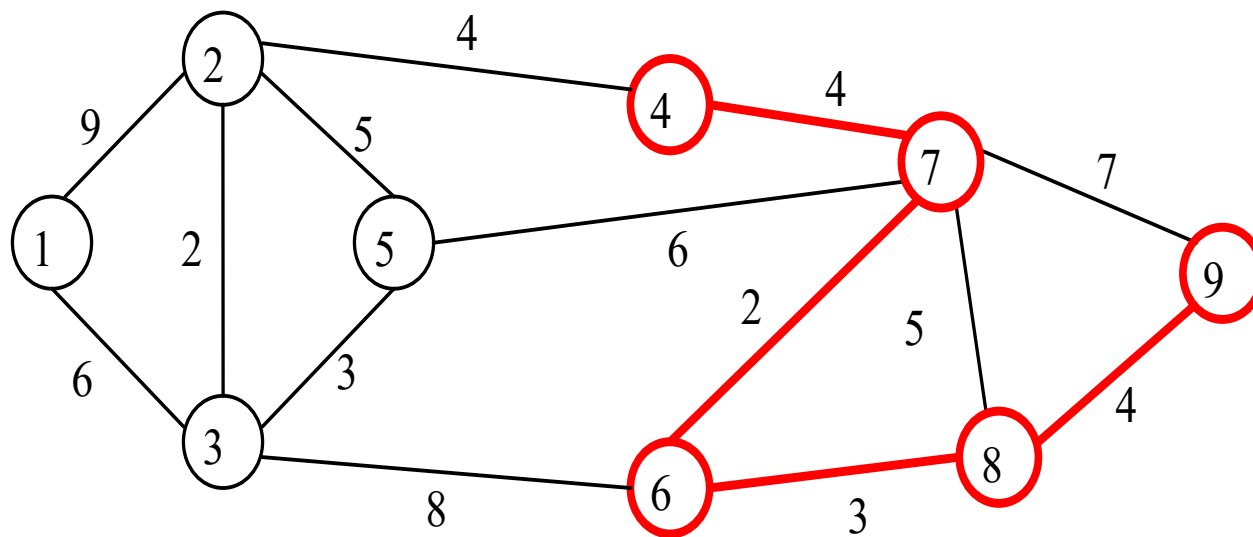

(b)

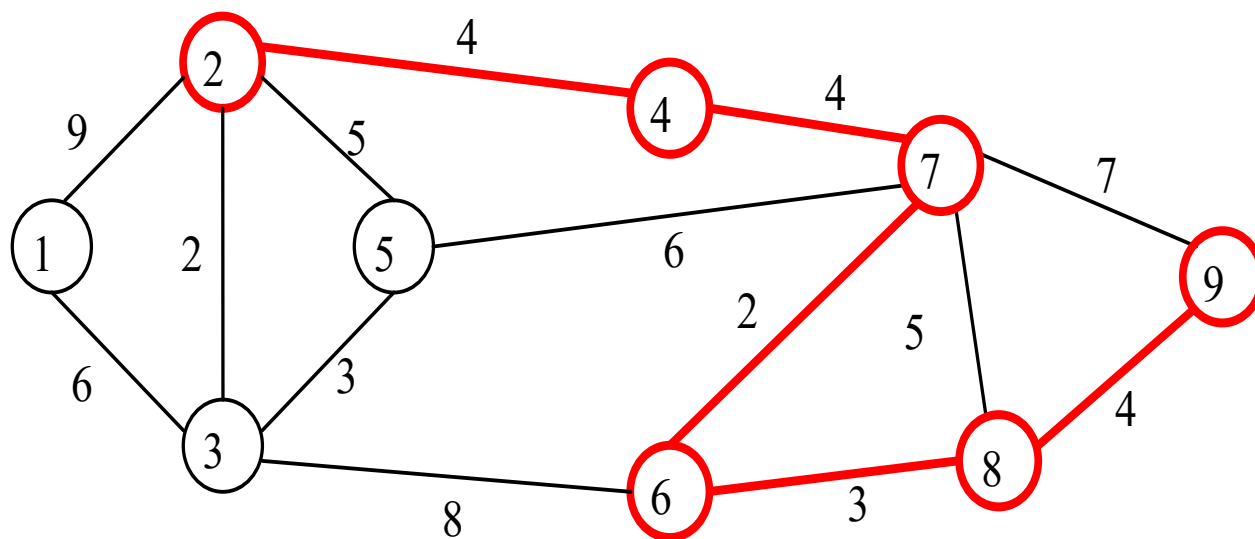

(c)

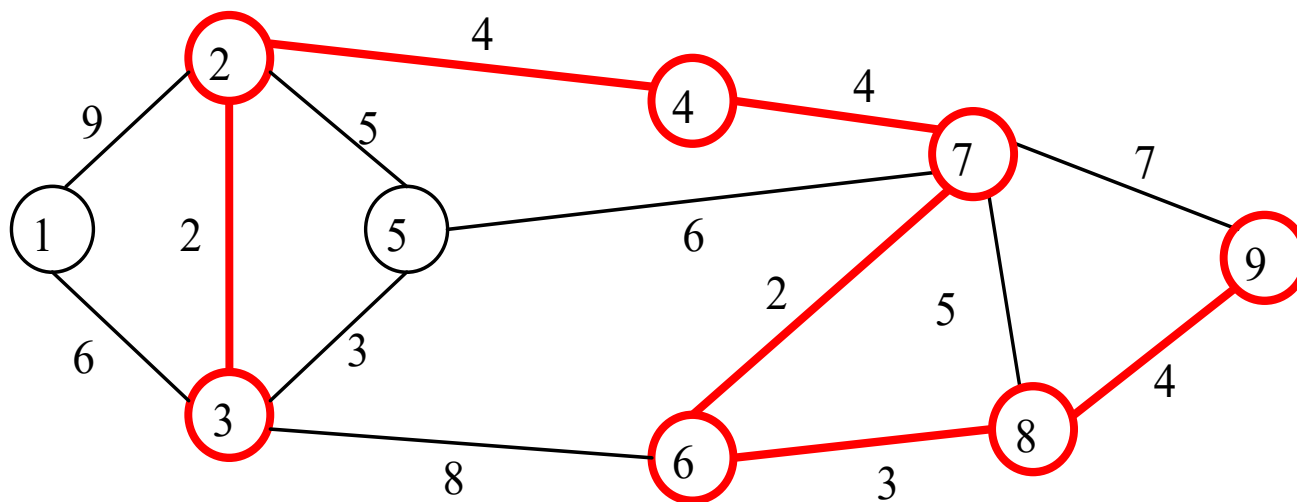

(d)

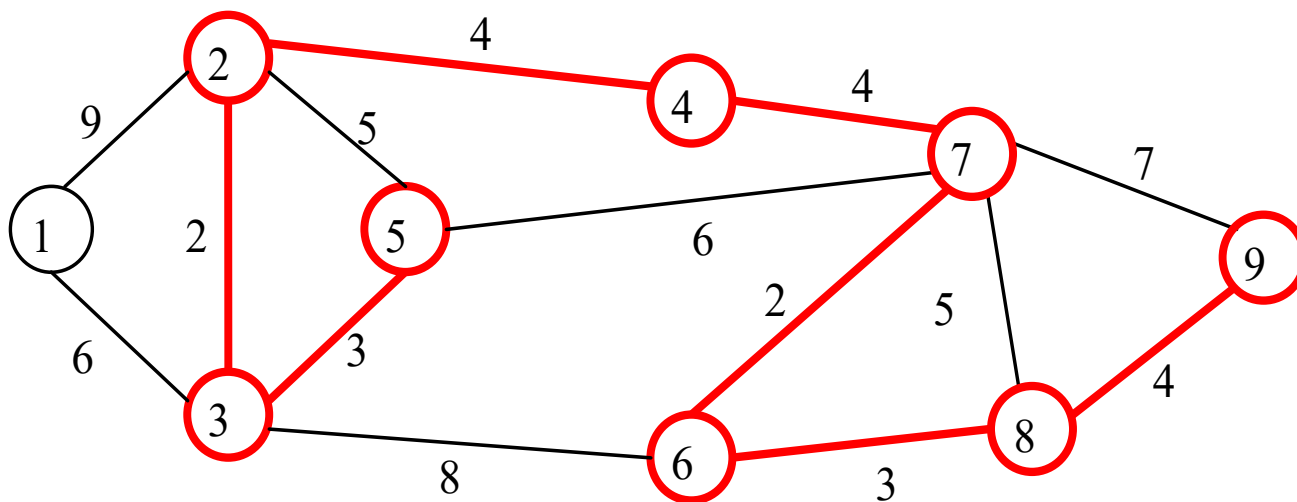

(e)

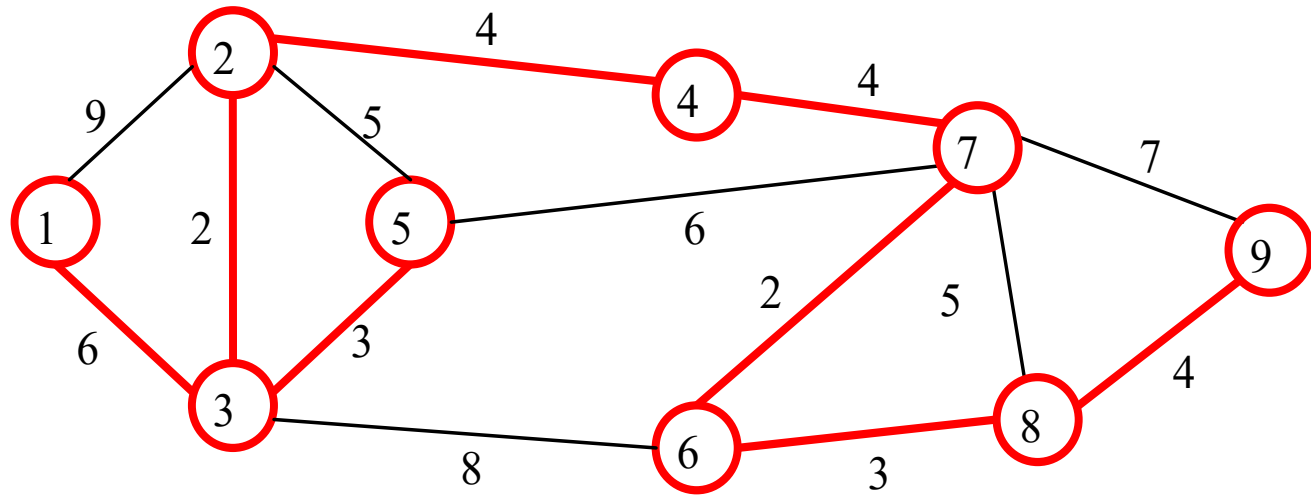

(f)

(g)

(h)

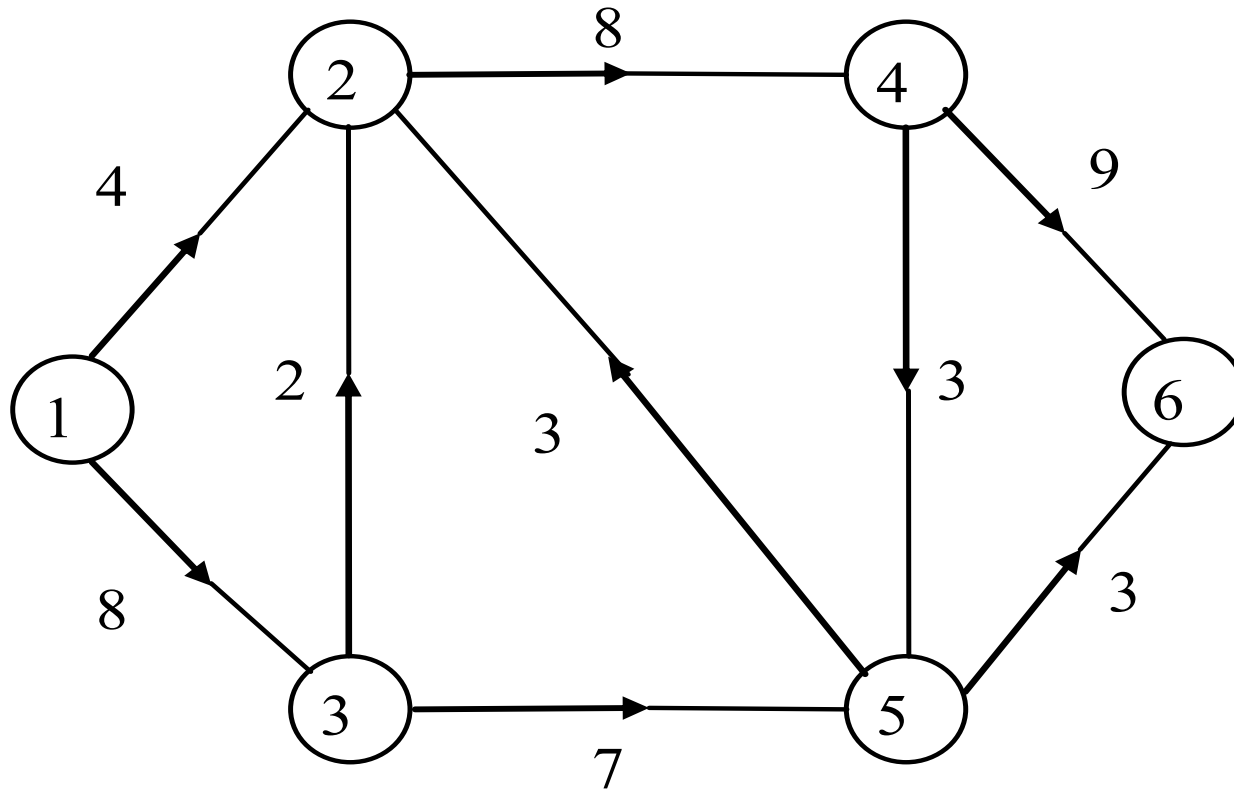

(I)

伸展樹之總長 =  $6 + 2 + 3 + 4 + 4 + 2 + 3 + 4 = 28$

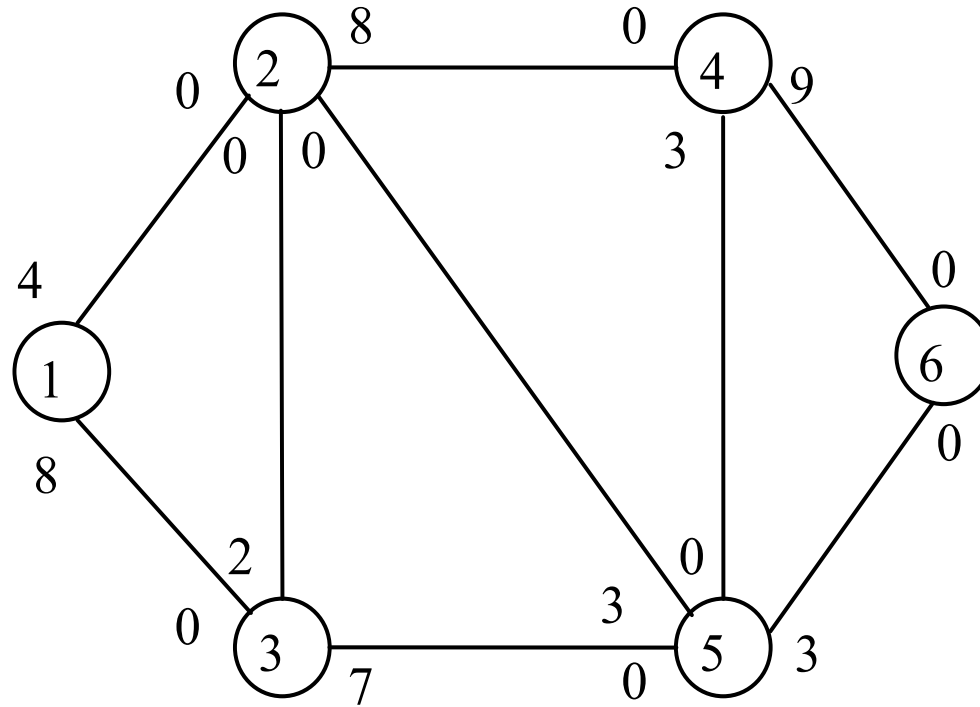

# 例題8-6

求網路自節點 ① 至節點 ⑥ 的最大流量

# 解：

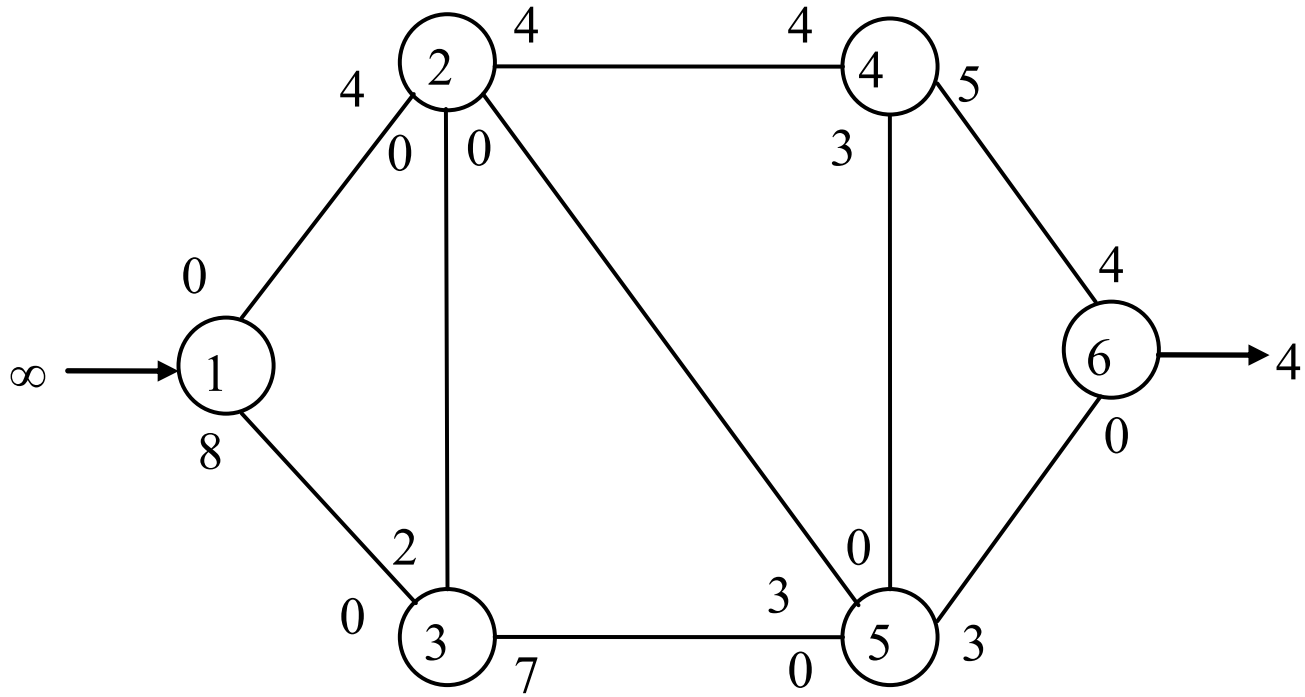

依題目網路圖得下之網路圖。解題過程詳見圖 8-14(a) ~ (e)

路徑 ① — ② — ④ — ⑥ ,  $f^* = 4$

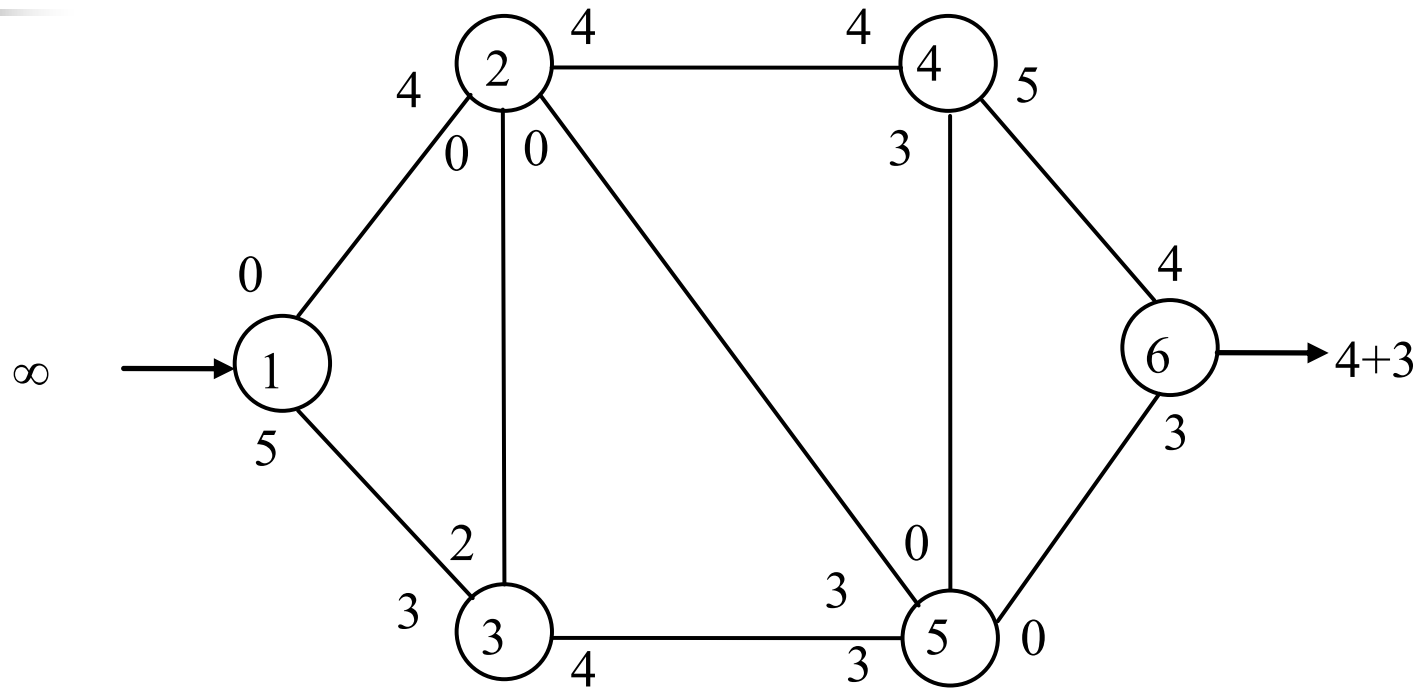

(a)

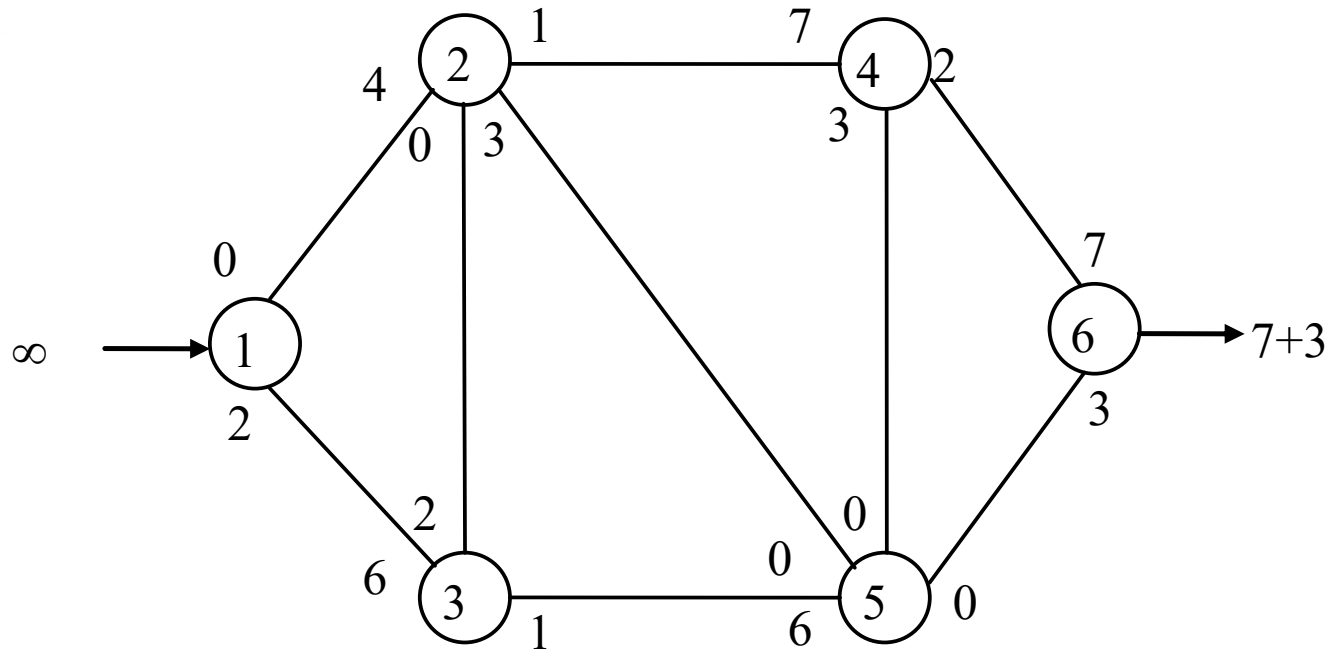

路徑 ① — ③ — ⑤ — ⑥ ,  $f^*=3$

(b)

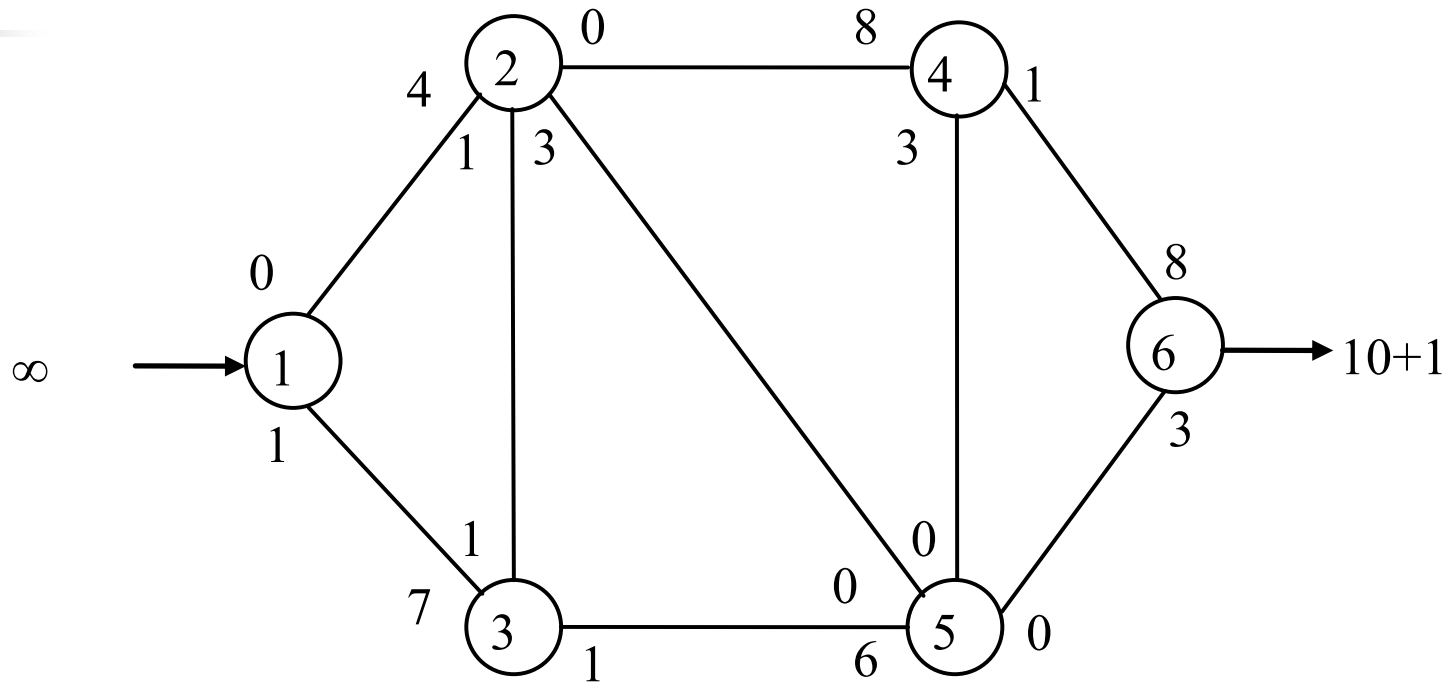

路徑 ① — ③ — ⑤ — ② — ④ — ⑥ ,  $f^*=3$

(c)

路徑 ① — ③ — ② — ④ — ⑥ ,  $f^*=1$

(d)

已無自節點 ① 到節點 ⑥ 的正流通量路徑，  
故最大流量 11。

(e)
